Every Musician's Companion • Android — Phone & Tablet

BUSKIT

Your Live Sound Studio, in Your Pocket

Pro effects, a microtonal tuner, metronome, drum machine and arrangement tools — everything you need for a live performance, in one app.

5 days free, with every feature

buskitapps.com

Musician, teacher or student?

How many music tools do you carry everywhere? Tuner, metronome, effects pedals, a recorder, backing track files and more… Now keep them all in one professional app.

What is Buskit?

Buskit is designed and built for Android phones around the real needs of musicians — live performances, personal practice and group rehearsals — and for every kind of instrument, whether native and folk or international.

Your instrument or voice is captured by the phone's microphone or an external microphone, passes through the effects chain instantly, and reaches your audience in high quality — powered by a native audio engine for real-time processing.

20
Popular effects

8
Simultaneous backing tracks

21
Standard drum patterns

What makes Buskit different?

Similar apps exist, but Buskit's performance and capabilities set it apart for live playing.

Other free versions

Most suffer from heavy latency, which makes real live playing practically impossible.

Low-latency alternatives

Usually expensive, and dependent on new, up-to-date phones.

Buskit

Real-time, low-latency processing of your instrument — no pedalboard, no pro amplifier — and it runs usefully even on relatively old phones.

Every Musician's Companion

Everything you need for a live performance, in one app.

Key Benefits

- Always with you
- Needs no extra gear
- Adds no extra weight
- No separate power supply or battery needed
- No need to carry multiple pedals or expensive pedalboards
- No pro amplifier or sound system needed — any speaker with an Aux input will do
- No pro recording rig needed to record your performances
- Works with a wide range of phones, even relatively old ones
- Very low latency — fast enough for live playing
- Practice any time, anywhere, without disturbing others — e.g. late-night practice on electric guitar
- A tool for practicing with backing tracks and a drum machine
- Rich, dreamy sound effects at any moment
- Works with all kinds of microphones (dynamic, condenser, clip-on or adhesive piezo, under-saddle)
- Easy and smooth to use
- Suitable for every singer, podcaster, instrumentalist, student, composer or music teacher

Connecting Your Instrument to the App

1. Phone microphone *the simplest way*

The simplest way is to use the phone's own microphone. In the app, set the input source to "Automatic" or "Built-in microphone", then connect the phone's output to headphones (for private monitoring) or, via a stereo cable with a 3.5 mm plug, to the Aux input, microphone input or guitar input of any amplifier or speaker. Your instrument or voice is picked up by the phone's mic and sent to the output — your phone acts as a high-quality microphone and a feature-rich mixer in one.

2. Earphones / headset

Plug the headset into your phone, launch the app and load the effect or rhythm you want. Your instrument is picked up by the headset's microphone and, after the requested effects are applied, you hear it through the headphones.

3. An iRig device

If you want to bring your instrument or voice into the app through an external dynamic microphone or a piezo pickup (under-saddle, adhesive or clip-on), a small iRig device — easy to find in stores — is all you need. Connect its cable to the phone, plug the microphone into its mic input, and send its output to headphones or a speaker/amplifier.

All of This in One App

Metronome, tuner, diapason and backing tracks — a musician's everyday tools, in a single toolbox.

Metronome

METRONOME

- Tempo from 40 to 500 BPM, with adjustable click volume
- Play any rhythmic pattern you like — standard, compound or asymmetric (aksak)
- TAP tempo for setting the tempo by hand
- **Automatic tempo increase** while you practice, based on time or number of bars played
- Choose the base beat: eighth, quarter or dotted quarter note

Tuner

TUNER

- **Microtonal tuner** — define a deviation from the main note between -80 and +80 cents
- Reference pitch adjustable from 435 to 445 Hz
- Shows note frequency and deviation in cents
- Needle display detecting all 12 notes, with koron and sori quarter-tone marks

Microtonal Diapason

DIAPASON

- Generate any tone with cent-level precision, from A0 to C8
- Choose the waveform: triangle, sine or square
- Play the tone as a play/silence pulse
- Ideal for tuning your instrument by ear

Backing Track

BACKING TRACK

- Load up to 8 rhythm or song tracks at once, with volume control
- Change playback speed without changing pitch
- 3-band equalizer to improve each track's sound
- Save tracks and parameters as a preset and recall them later
- Play MIDI files with the built-in synth and sampler

All tools live together in one **toolbox** — no installing several separate apps and no switching between them. Access to each tool depends on the **version** you choose (see the Versions page).

20 Popular Effects, Chained and Live

Switch effects on and off like pedals, tweak the parameters with your finger and hear the result instantly.

Dynamics & Clean-up

Equalizer ×9 band · Compressor · Noise Gate · Limiter · Exciter

9-band equalizer, compressor, noise gate and limiter — clean, controlled sound for stage and recording.

Space & Time

Delay · Ping-Pong · Ducking · Room · Plate · Hall · Spring · Custom

Delay (simple and ping-pong with ducking) and reverb (room, plate, hall, spring, custom).

Modulation

Phaser · Flanger · Chorus · Vibrato · Wah-Wah

From nostalgic vibrato to funky wah-wah — rich, dreamy effects at any moment.

Overdrive & Distortion

Warm OD · Classic OD · Tube OD · Hard Dist · Fuzz

Overdrive (warm, classic, tube) and distortion (hard, fuzz) — from warm tube blues to hard rock and metal.

Pitch & Harmony

Pitch Shifter · Harmonizer · Octaver

Pitch shifter (12 semitones), harmonizer and octaver — shift notes without changing your instrument or tuning.

Cabinets (9 types)

Combo · Open · Classic · Modern · Small · Tweed · Orange · Fat · Scoop

Cabinet simulation, from small combos to modern and classic cabs.

Full control, while you play

- Effects are activated as a chain
- Save the parameters of all effects in one preset; cabinet and equalizer can also be saved separately
- Change parameters, or add and remove effects, live while you perform

Drums, Arrangement, Recording & Sound Control

From building rhythms and arranging a piece to recording your performance directly — everything you need to create and capture music.

Gold

Drum Machine

DRUM MACHINE

- Build any rhythmic pattern from a chosen rhythmic figure, with a step grid
- Set the volume of each technique separately, with double-stroke support
- 21 built-in standard patterns, editable and customizable
- Save patterns as presets
- Export as Wave and use it as a backing track
- Triplets and six dynamic levels

Kick · Snare · Hi-Hat (Closed) · Hi-Hat (Open) · Hi-Hat (Pedal) · Ride · Crash · Rim · Tom Mid · Tom Low · Cowbell · Cabasa

Gold

Arrangement

ARRANGEMENT

- Arrange a piece harmonically by entering a chord for each beat
- Save the piece as MIDI or Wave
- Real samples are used when rendering Wave

Guitar · Piano · Strings · Spiccato · Pizzicato

Direct Recording

RECORD

- Record your live performance together with the backing track as WAV to the phone's storage
- With a single button press
- The best way to capture ideas and make demos

Source & Volume

INPUT / OUTPUT

- Choose the audio input source: built-in phone mic, external mic or automatic
- Raise or lower the input level (for sensitivity) and the output level (for a louder, fuller sound)

Why Buskit?

Everything in one app

Effects, tuner, metronome, drums, backing tracks, recording and arrangement — no need to install several separate apps.

Real-time processing

A native audio engine for live playing, with the lowest latency possible on any device.

One-time purchase, no subscription

Secure payment through Google Play, with purchase restore and license transfer to another device.

Where does it fit?

1. **Street & café performance**
   All your effects in your pocket — no pedal case, no heavy bag.
2. **Live shows & concerts**
   A preset for every piece, with backing tracks and drums at hand.
3. **Practice any time, anywhere**
   E.g. late-night electric guitar practice without disturbing anyone.
4. **Demos & capturing ideas**
   Record processed sound as WAV, anywhere, anytime.
5. **Lessons & teaching**
   Tuning and rhythm tools for teachers and students.
6. **Arranging & composing**
   Arrangement, chords and MIDI export for building a piece.

Who is Buskit for?

- **Folk & traditional instruments**
  Baglama, oud, ney, kamancheh, tar
- **Percussionists**
  Tonbak, daf, darbuka
- **Guitarists & bassists**
  Acoustic, electric, classical
- **Violin & string players**
  With a microphone or piezo
- **Singers & podcasters**
  Reverb, delay and vocal effects
- **Composers & arrangers**
  Arrangement, MIDI and drums
- **Teachers & students**
  Tuner, metronome, diapason
- **The mobile musician**
  Play anywhere, with just a phone

Buskit — the only tool every musician needs. From the street corner to the concert hall, your sound exactly the way you want it.

Versions; each for a different need

Downloading Buskit is free, and it comes in 4 versions. Buy any version directly, or upgrade from a lower version by paying the difference.

5 days free, with all Gold features (trial version)

To test the app and check its compatibility with your phone or tablet; it is temporary and deactivates 5 days after installation.

Bronze

Simple and practical

- 9 core effects: Gate, Comp, EQ, Delay, Reverb, Limiter, Phaser, Fuzz, Warm OD
- Chromatic tuner with a fixed 440 Hz reference
- Simple metronome, no automatic tempo change
- WAV recording
- 4-track backing track
- Up to 10 personal presets

Silver

All of Bronze, plus the full tools

- 19 effects
- Full tuner with custom reference and **microtonal** mode
- Full metronome with automatic tempo increase
- Microtonal diapason
- 6-track backing track, with speed change and equalizer
- Up to 50 personal presets

★ The most complete choice ★

Gold (PRO)

All of Silver, plus the full studio

- All 20 effects, with **cabinets (9 types)**
- **Drum machine** with 21 built-in patterns
- **Arrangement** with MIDI and WAV export
- 8-track backing track
- **Unlimited personal presets**
- Every feature in the app, nothing locked

One-time purchase (no subscription) via Google Play • the price of each version is shown on the app's purchase page

Download the app from Google Play

Try Buskit right now and build your dream

Free download and trial: install the app and enjoy all Gold features for 5 days, at no cost.
