BUSKIT

The Companion Tool for Every Musician

Everything you need for a live performance – in one app

Musician, teacher or student?

How many music devices do you always carry around? Tuner, metronome, effects pedal, recorder, backing track files and more – now you can have it all in one professional app.

What is Buskit?

Buskit is a tool designed and built for Android smartphones around the needs of musicians in live performances, personal practice and group rehearsals, for all kinds of instruments – whether native and folk instruments or international ones.

Apps with relatively similar features exist, but this app's performance and capabilities set it apart for live use. The free versions of most of them have high latency and in practice do not let the artist play live; low-latency alternatives are usually expensive and depend on new phones with current technology. Buskit processes the instrument's sound live with low latency, without a pedalboard and without a professional amplifier, and can run and be useful even on relatively old phones.

Key Benefits

- Always with you
- No extra equipment needed
- Suitable for any singer, podcaster, musician, student, composer or music teacher
- No separate power or battery needed
- No added weight
- No need to carry multiple pedals or expensive pedalboards
- No amplifier or professional sound system needed; any speaker with an Aux input will do
- No professional recording system needed to record your performances
- Compatible with most phones, even relatively old ones
- Very low, near-zero latency – making live playing possible
- Practice at any hour and anywhere without disturbing others – e.g. electric guitar at midnight
- A tool for playing along with backing tracks and a drum machine
- Rich, dreamy sound effects at any moment
- Compatible with many microphones (dynamic, condenser, adhesive or clip-on piezo, under-saddle/bridge pickup)
- Easy and smooth to use

Connecting Your Instrument to the App

1 Phone Microphone

The simplest way is to use the phone's own microphone. In the app, set the input source to "Automatic" or "Internal microphone", then connect the phone's output to headphones (for private monitoring) or, with a 3.5 mm stereo cable, to the Aux, microphone or guitar input of any amplifier or speaker. The sound of your instrument or voice is picked up by the phone's microphone and sent to the output; your phone acts as a high-quality microphone together with a feature-rich mixer.

2 Earphones with Mic

Plug the earphones into the phone, launch the app and load the effect or rhythm you want; your instrument's sound is picked up by the earphone microphone and, after the chosen effects are applied, heard through the earphones.

3 iRig Device

If you want to bring the sound of your instrument or voice into the app with an external dynamic microphone or a piezo pickup (under-saddle, adhesive or clip-on), a small iRig device, easily found on the market, is all you need. Connect the device's cable to the phone, plug the microphone into its mic input, and send its output to headphones or a speaker/amplifier.

All in One App

Metronome

- Tempo adjustable from 40 to 500
- Metronome volume adjustment
- Play any rhythmic pattern – from standard and compound to asymmetric (aksak) rhythms
- TAP function to set the tempo manually
- Automatic tempo increase during practice, based on time or number of bars played
- Choose the base beat: eighth, quarter or dotted quarter

Tuner

- Microtonal tuner with a definable deviation from the main note between −80 and 80 cents
- Reference frequency adjustable between 435 and 445 Hz
- Display of note frequencies and deviation in cents

Microtonal Tuning Fork

- Generate any tone with cent accuracy, from A0 to C8
- Waveform selection: triangle, sine or square
- Pulse mode playback (sound/silence)

Backing Track

- Load up to 8 rhythm or backing tracks at once
- Volume adjustment
- Change playback speed without changing pitch
- Three-band equalizer to improve the track’s sound
- Save tracks and parameters as a preset and recall them later

Drum Machine

- Create any rhythmic pattern based on a chosen rhythmic figure
- Kick, snare, hi-hat (closed, open, pedal), ride, crash, rim, tom mid, tom low, cowbell, cabasa
- Separate volume for each technique, including double stroke
- Save patterns as presets
- Wave export and use as a backing track
- 21 built-in standard patterns, editable and customizable

Effects

- 20 popular effects: 9-band equalizer, compressor, delay (simple and ping-pong with ducking), reverb (room, plate, hall, spring, custom), phaser, flanger, chorus, vibrato
- Overdrive (warm, classic, tube) and distortion (hard, fuzz), exciter, wah-wah, noise gate, limiter
- Pitch shifter (12 semitones, harmonizer, octaver) and cabinet (9 types: combo, open, classic, modern, small, tweed, orange, fat, scoop)
- Effects can be activated in a chain
- Save the parameters of all effects in one preset; cabinet and equalizer can be saved separately
- Change parameters or add and remove effects live during the performance

Arrangement

- Arrange a piece harmonically by entering a chord for each beat
- Playback with guitar, piano, strings, spiccato and pizzicato sounds
- Save the piece in MIDI or Wave format
- Use real samples when creating the Wave file

Direct Recording

- Record your live performance together with the backing track in WAV format on the phone's storage – with a single button press

Source and Volume

- Choose the input source: phone's internal microphone, external microphone or automatic
- Raise or lower the input level (for higher sensitivity) and the output level (for a louder, fuller sound)

Versions

Downloading Buskit is free, and it comes in 4 versions. You can buy any version directly, or upgrade from a lower version to a higher one by paying the difference.

	Number of effects	Metronome	Tuner	Tuning fork	Backing track	Drum machine	Arrange-ment	Recording	Backing track speed change
Trials free	20	Full	Full	Yes	8 tracks	Yes	Yes	Yes	Yes
Bronze	9	No tempo change	Chromatic, no reference frequency change	No	4 tracks	No	No	Yes	No
Silver	19	Full	Full	Yes	6 tracks	No	No	Yes	Yes
Gold	20	Full	Full	Yes	8 tracks	Yes	Yes	Yes	Yes

The Trials version is temporary and valid for 5 days; it is for testing the app and checking its compatibility with your phone or tablet, and is deactivated 5 days after installation.
